## DETAILED ACTION

### *Election/Restrictions*

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are to be elected as follows:

First, it must be indicated which of the A, D, M, Z, O, N, and F components must be present in the claimed formula.

Then, with respect to each component that must be present, it must be indicated which element must be present.

The following table summarizes the species election requirement:

Required? (Yes or no)	If required, which element(s) must be present?
A	One of the alkali metals.
D	One of the alkaline earth metals or Group III elements (excluding B)
M	One or more of the transition metals.
Z	S, Se, P, As, Si, Ge, Sn, or B
O	O
N	N
F	F

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

None of the claims are deemed to correspond to the species listed above.

The following claim(s) are generic: Claim 1.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Claim 1 provides for a compound comprising  $A_a D_d M_m Z_z O_o N_n F_f$  and each one of a, d, m, z, o, n and f is a real number greater than or equal to zero. This formula can include virtually any combination of elements from most of the Periodic Table. It also can include an elemental material such as a metal or  $O_2$ . When a, d, m, z, o, n, and f are all zero, moreover, the material would comprise only "an electronically conducting compound such as carbon". See also, the International Search Report that cites both CA 2270771 and WO 02/083555 as "X" references for claims 1-28 in the PCT application.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

Art Unit: 1796

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
